About Braille Printing

By setting a spot color name for the braille data you created, you can easily print braille in a dome shape which conforms to ADA (Americans with Disabilities Act) and JIS (Japanese Industrial Standard) (Quality standard JIS T9253 for braille with UV-curable resin ink).

	• The dome shape may be slightly different depending on the differences in printer condition, settings, or media types.

In RasterLinkTools, **Standard speed mode** and **High speed mode** can be selected besides **Compliant mode** (which can produce JIS and ADA compliant Braille as described in this document), but UJF-7151plus/UJF-3042MKII/UJF-6042MKII does not support these modes.

# Target environment and precautions for this manual

Please confirm the target environment and precautions in this manual as follows.

Target Environment

Printer	• UJF-7151plus / UJF-7151 plusII / UJF-3042MkII / UJF-3042MkII e / UJF-3042MkII EX / UJF-3042MkII EX e / UJF-6042MkII / UJF-6042MkII e / JFX200-1213EX
Ink	• LH-100 / ELH-100 (Clear, Primer) Braille is created using Clear and Primer.
Mimaki Driver	• When using RasterLink6Plus: The version that is compatible with the printer you use. • When using RasterLink7:Ver.5.9.6 or later
Software	• RasterLink6Plus Ver.1.8 or later • RasterLink7 Ver.3.3.0 or later • RasterLinkTools for Illustrator Ver.1.5.3 or later • [Windows] Adobe® Illustrator® CS6 or later CorelDRAW Ver1.4.1(32/64bit) or later • [Macintosh] Adobe® Illustrator® CS6 or later

Notations for the Jobs

In this guide, terms "Braille job" and "Job of which Job Attribute is Braille" are used, and each represents the following condition. Make sure you do not get them mixed up.

Notes

	• For the job of which Job Attribute is Braille, Braille is not be displayed for preview. • Braille job and cut job cannot be composed.

Role of Software

The roles of software are as follows.

Illustrator

Creating Braille data
Create the Braille data based on the Braille syntax.

RasterLinkTools

Set the spot color for Braille printing
You can set and save spot colors for Braille printing in the pre-existing Braille data.

RasterLink

Printing Braille
You can print the dome-shaped Braille automatically without setting the print count and so on.

# Preparation for Braille Printing (RasterLink6Plus only)

Before performing Braille printing, install the profiles in the following list to RasterLink6Plus for the target printer. If Braille data is sent to RasterLink6Plus without the following profiles installed, an error message is displayed, and Braille data cannot be read in.

Printer	Ink set	Output setting	Media	Media material
UJF-7151plus	LH-100 CMYK ELH-100 CMYK	600 x 900VD	UV- PET	White PET Gloss
UJF-3042MkII	LH-100 CMYK ELH-100 CMYK	1200 x 1200VD[*]	UV- PET V3.5	
UJF-3042MkII EX	LH-100 CMYK ELH-100 CMYK	1200 x 1200VD[*]	UV- PET V3.5	
	LH-100 CMYKLcLm ELH-100 CMYKLcLm			
UJF-6042MkII	LH-100 CMYK ELH-100 CMYK	1200 x 1200VD[*]	UV- PET V3.5	
	LH-100 CMYKLcLm ELH-100 CMYKLcLm			

*. For UJF-3042MkII, UJF-3042MkII EX and UJF-6042MkII, only the last print layer (Clear) is printed at 600 x 600VD.

Print Braille

Print Braille on the color plate. Here, the following procedure is used for an explanation using an example of the standards for Braille of ADA.
1. [Illustrator]   Create Braille data (☞ P.6)

2. [RasterLinkTools]   Set special colors for the braille data, then send the data to RasterLink (☞ P. 7)

3. [RasterLink]   Change the Print Conditions for data as desired (☞ P.7)

4. [RasterLink]   Print (☞ P.8)

1. Create the Braille data. (Illustrator)

(1) Based on the Braille syntax, check the Braille arrangement for the character you want to create.

Example

Mimaki ➡

(2) Use the Ellipse Tool in Illustrator to create the following shape.
- Shape: Perfect circle
- Diameter: 1.55 mm (ADA)
  If you set the Line to none, it will be easier to adjust the position in the next step.

**(3)** Layout the shape you created in (2) based on the standards for Braille of ADA.

(Important!)	• If the data is not created as described in steps 1 (1) to (3) on P. 6, it may not be possible to print braille complying with standards.
	 • Braille may not be printed correctly with data that includes transparency effects.
	 When printing is not correctly with RasterLink7, save it in PDF format of PDF 1.4 or later from the file save function of Illustrator.
	 • When using RasterLink7, the maximum number of Braille characters that can be printed per print job is 4,000.
	   • When the number of copies is specified on the General Print screen of RasterLink7,
	     "Number of copies x number of Braille characters in a job" should not exceed 4,000.
	     Example: If the number of copies is set to 20, the maximum number of Braille characters in a job is 4,000 divided by 20 is equals 200.

2. Set Special Colors for the Braille Data, then Send the Data to RasterLink (RasterLinkTools)

(1) Select the Braille data on Illustrator.

**(2)** Click the [Braille] icon ⣿ on RasterLinkTools.

- "MmkBraille_ADA" is attached to the Braille data line, and the Stroke is set to "0.5 pt", and the Paint is set to "None".
- The [Braille Function RL Output] window appears.

(3) Select "ADA" in [Compliant] mode.

(4) Click [Output].
- The [Save as] window appears.
- Enter the file name and save.

- The job which is composed of Color and Braille is registered to Raster-Link6Plus.
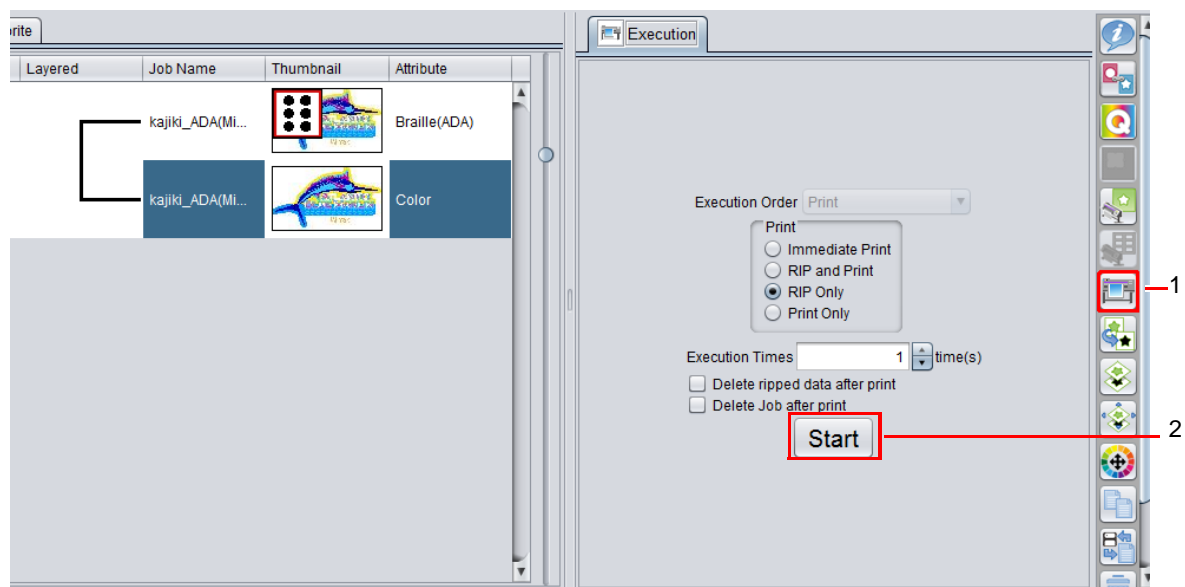

---

3. Change the Print Conditions for data as desired. (RasterLink)

⚠️ **Caution**	• You cannot set the following for the Braille job.
	     • Arrange with other job
	     • Change the scale
	     • Turn on the Mirror function
	     • Add Fotoba cut mark
	     • Crop
	     • Jig Print
	     • Step & Repeat
	     • Tiling
	     • Kebab Jig Print
	 • You cannot do the following for the job of which the Job Attribute is "Braille".
	     • Change the Print Condition
	     • Color Replacement and Special plate

4. Execute printing. (RasterLink)

(1) Click the [Execute] icon 🖼 .

(2) Click [Start], and execute printing.

	• Printing is performed automatically with multiple feeds so that the height of the Braille conforms to the standards of ADA.
	• The printing time for one row of Braille is approximately 37 minutes. (For UJF-7151 plus)
