Foreword

This manual describes the preset and re-plotting functions of FineCut/Coat, the plug-in software included with Mimaki cutting plotters. For information on how to operate FineCut/Coat, refer to the FineCut/Coat9 Reference Guide and the related manuals.

Precautions

- Any unauthorized use or reproduction, in part or whole, of this manual is strictly prohibited.
- The information in this manual may be subject to change without notice in the future.
- Note that some of the descriptions in this manual may differ from the actual specifications due to improvements and revisions to this software.
- Copying Mimaki Engineering Co. Ltd. software described in this manual to other disks (except for the purpose of backup) or loading it to memory other than for the purpose of running it, is strictly prohibited.
- With the exception of what is provided in the warranty provisions, Mimaki Engineering Co. Ltd. does not assume any liability for any damage (including, but not limited to, the loss of profit, indirect damage, special damage, or other monetary damages) resulting from the use or inability to use this product. The same shall also apply to cases where Mimaki Engineering Co. Ltd. has been advised of the possibility of damage in advance. For example, we shall not be liable for any loss of media (work) caused by use of this product or indirect losses caused by products created using the media.

About this Guide

Notation used in this guide

- The buttons and items displayed in screens are enclosed in square brackets, such as [OK] and [Open].

Symbols used in this guide

Description		
	Important	The "Important" symbol represents information you must be familiar with when using this tool.
	Mandatory action sign	Indicates an action that must be carried out. The specifics of the mandatory action are drawn inside the symbol.
	Tip	The "Tip" symbol represents useful information to know.
	Reference information	Indicates the corresponding page for related information. Clicking the symbol takes you to the applicable page.

How to obtain this guide and related documents

The latest versions of this guide and related documents are available at the following location:

		If specifying plot conditions for each color ..	32
		Applying Presets	34

1.1 Preset Overview

Presets are a function that lets you save and re-use output settings. Utilizing presets can greatly reduce the workload for inputting output settings.

Settings that can be saved in presets

The following settings are saved in a preset.

- Plot conditions
- "Plot" screen settings
- "Plot Out" screen settings

In this document, the cut tool and cut conditions are referred to as "plot conditions".

The output conditions and the settings including the "Plot" screen settings and "Plot Out" screen settings are referred to as "output settings".

- For a list of settings saved in the output settings, refer to the "Preset and Re-plotting Registration List" in Chapter 6 "Description of Functions".

How to Use Presets

Presets are used roughly by following the procedure below.

1. Register the "layer names" or "colors" to be used in the design data in advance.
2. Input the output conditions linked to the "layer names" or "colors" and register the output settings, including the layout and the like, in the preset.
3. Apply a preset when outputting design data.
 - The output conditions registered in the preset are applied to the "layer name" or "color" of the data.
 - Output settings are applied to the Plot screen and the Plot Out screen.

1.2 Workflow

If Registering Presets from [Preset Settings]

1. [FineCut/Coat9] Layer/Color Registration

- If specifying output conditions for each layer
 - ☞ "Layer Name Registration Procedure"(P. 12)
 - ☞ "5.2 If specifying plot conditions for each layer"(P. 51)
 - (When using the Favorite function on a flatbed plotter)
- If specifying output conditions for each color
 - ☞ "Registering Colors from Design Data"(P. 16)
 - ☞ "Registering Colors Using the Color Component Value"(P. 18)
 - ☞ "5.3 If specifying plot conditions for each color"(P. 54)
 - (When using the Favorite function on a flatbed plotter)

2. [FineCut/Coat9] Preset Settings

- ☞ "1.5 Registering a New Preset"(P. 22)

3. [Design software] Design Data Creation

- If specifying output conditions for each layer
 - ☞ "4 Automatically Creating Layers for Presets"(P. 47)

4. [FineCut/Coat9] Plotting

- ☞ "1.7 Applying Presets"(P. 34)
- ☞ "3 Selecting Output Settings Before Plotting"(P. 43)

If registering presets from FineCut/Coat9

1. [FineCut/Coat9] Output Settings Configuration

- Configure the output settings on the Plot screen and Plot Out screen.
Refer to the FineCut/Coat9 Reference Guide for details.

2. [FineCut/Coat9] Preset Settings

- ☞ "1.6 Registering Presets in FineCut/Coat9"(P. 30)

3. [FineCut/Coat9] Plotting

- ☞ "1.7 Applying Presets"(P. 34)
- ☞ "3 Selecting Output Settings Before Plotting"(P. 43)

1.3 Registering Layers

Configure the settings to specify output conditions for layers of design data. This is the recommended method if managing plotting objects by layers.

Description

Register layer names in advance to specify presets that specify output conditions for each layer.

Registering the layer names to be cut in advance is called "layer setting".

Important!

- Register the layer names commonly used in the design data. The layer names registered in the layer settings are used in all presets.
- If the layer name in the design data is different from the layer name in the layer settings, the preset will not be applied automatically. Layer names that are not registered in the layer settings are excluded from the cut.

If using the "Favorite" function in FineCut/Coat

- The procedure for layer setting can be simplified by importing the registered "Favorite" information.
- Proceed to  ["If specifying plot conditions for each layer"\(P. 51\)](#).

● Example of applying output conditions to a layer

Layer Setting screen

Register a layer name on the [LayerSetting] screen.

1	Model names	Displays the name of the model currently selected for FineCut/Coat.
2	Import from favorites	Loads layer names from [Favorite] in FineCut/Coat. • Refer to the FineCut/Coat9 Reference Guide for details on the [Favorite] function.
3	Move Column	Changes the order of layer names displayed in the [Layer List].
4	 button	Register a new layer name.
5	 column	Displays a sub-menu for each layer name.
	Edit	Changes the layer name.
	Delete	Deletes the layer name registration. Please note that any presets that are set for the layer that outputs this layer will be deleted at the same time as the layer.
6	Layer Name	Displays the layer name.
7	OK	Saves the settings and closes the screen.

Layer Name Registration Procedure

Enter and register a layer name.

Important!

- It is recommended that you register the layer names of all layers that could be plotted.
- Layer names should be common to all design data.

1 Click the [Preset Settings] button in the FineCut/Coat menu.

2 Click [LayerSetting].

3 Click the  button.

4 Enter a layer name and then click [OK].

- Layer names that have already been registered cannot be used.

5 Repeat Steps 3 to 4 until all necessary layers have completed registration.

6 Click [OK] on the [LayerSetting] screen.

- The display order in the layer settings is the basis for the cut order when creating a preset.
- Setting the cut order of layers here makes it easier to set the cut order when setting presets.

1.4 Registering Colors

Configure the settings to specify output conditions for colors of design data. This is the recommended method if managing plotting objects by colors.

Description

Register colors in advance to specify presets that specify output conditions for each color. Registering the color names to be cut in advance is called "color setting".

If using the "Favorite" function in FineCut/Coat

- The procedure for color setting can be simplified by importing the registered "Favorite" information.
- Proceed to ["If specifying plot conditions for each color"\(P. 54\)](#).

● Example of applying output conditions to a color

Default Color Set Screen

Register colors on the [ColorSetting] screen.

1	Import from design data	Loads colors from the currently opened design data.
2	Import from favorites	Loads colors from [Favorite] in FineCut/Coat. • Refer to the FineCut/Coat9 Reference Guide for details on the [Favorite] function.
3	CMYK tab	Displays colors registered with CMYK values.
4	RGB tab	Displays colors registered with RGB values.
5	Move Column	Changes the order of the displayed colors.
6	Fill color	Displays the fill color.
7	Line color	Displays the Line color.
8	Color	Displays the color as a numerical value. This is displayed by fill color and then Line color. If a special color name is set, the special color name is displayed.
9	button	Registers a new color.
10	column	Displays a sub-menu for each color.
	Edit color	You can change the fill color and Line color of the color.
	Delete color	Deletes a color.
11	OK	Saves the settings and closes the screen.

Registering Colors from Design Data

Register colors from design data.

Important!

- It is recommended that you register all colors that could be plotted.
- Colors should be common to all design data.

- 1 Open the design data.
- 2 Click the [Preset Settings] button in the FineCut/Coat menu.

- 3 Click [ColorSetting].

- 4 Click [Import from design data].

- This displays a list of colors used in the design data.

5 Select the check boxes for the colors you wish to load and then click [Add].

6 Click [OK] on the [ColorSetting] screen.

Registering Colors Using the Color Component Value

Enter CMYK or RGB values to register colors.

- 1 Click [Preset Settings] in the FineCut/Coat menu.

- 2 Click [ColorSetting].

- 3 Click the [CMYK] tab or the [RGB] tab.

4 Click the  button.

5 Click [Change].

6 Set the color value.

- You can select the basic eight colors or CutContour from the list.
- If you select [Custom], you can specify the color using a numerical value.
It is also possible to set a special color name to a numerically entered color.

7 Click [Add].

- Colors that have already been registered or invalid colors (where both fill and stroke are set to [None]) cannot be registered.

8 Click [OK] on the [DefaultColorSet] screen.

1.5 Registering a New Preset

Configure output setting from [Preset Settings] and register a new preset.

Important!

- Register layer and ColorSetting in advance.

If specifying output conditions for each layer

This section describes the procedure for registering a new preset when applying output conditions to a layer.

- 1 Click [Preset Settings] in the FineCut/Coat menu.

- 2 Click the  button.

- 3 Select the [Layer] check box and then click [OK].

4 Under [SetConditions], turn on [Tool] or [Plot conditions].

1	Specify The Plot Condition On Each Layer	When ON, this saves the output ON/OFF status, output order, and set conditions.	
2	SetConditions	Tool	You can select a tool for each layer.
		Plot conditions	You can select plot conditions for each layer.
		Not set	No tool/plot conditions are set for each layer.
3	Layer List Settings	Displays [LayerSetting]. • Layers cannot be deleted.	

5 Set the [OutputOrder], layers to be [Output], and [Tool] (or [Plot conditions]).

1	Move	Drag items to rearrange the output order.
2	OutputOrder	Displays the order of output.
3	Output	Select the check box for the layer name you wish to output.
4	Layer Name	Displays the name of the layer.
5	Tool/Plot conditions	Click to select a tool or output condition from the list.
6	... column	Displays [View output conditions]. Click to display a simplified list of output condition settings.

6 Enter the settings for [LayoutSettings], [Register Marks Settings], and [Output Setting], and then click [OK].

- For details on the setting items, refer to the "[Plot] Screen" and "[Plot Out] Screen" sections in Chapter 7 "Description of Functions" of the FineCut/Coat9 Reference Guide.
- If you do not want to apply [LayoutSettings], [Register Marks Settings], and [Output Setting], turn off [Set cut conditions].

7 Enter a preset name and then click [OK].

8 Click [OK].

OK

If specifying plot conditions for each color

This section describes the procedure for registering a new preset when applying plot conditions to colors.

- 1 Click [Preset Settings] in the FineCut/Coat menu.

- 2 Click the  button.

- 3 Select the [Color] check box.

- 4 Select either [CMYK] or [RGB] as the color mode and then click [OK].

- [CMYK]: Registers a preset using a CMYK value color.
- [RGB]: Registers a preset using an RGB value color.

5 Under [SetConditions], turn on [Tool] or [Plot conditions].

1	Specify The Plot Condition On Each Color	When ON, this saves the output ON/OFF status, output order, and set conditions.	
2	SetConditions	Tool	You can select a tool for each color.
		Plot conditions	You can select plot conditions for each color.
		Not set	No tool/plot conditions are set for each color.
3	Add color	Displays the [Edit color] pop-up.	

6 Set the [OutputOrder], colors to be [Output], and [Tool] (or [Plot conditions]).

1	Move	Drag items to rearrange the output order.
2	OutputOrder	Displays the order of output.
3	Output	Select the check box for the color you wish to output.
4	Fill	Displays the fill color.
5	Line	Displays the line color.
6	Color name	Displays the color as a numerical value. This is displayed by fill color and then Line color. If a special color name is set, the special color name is displayed.
7	Tool/Plot conditions	Click to select a tool or output condition from the list.
8	*** column	Displays [Add color], [Edit color], [Delete color], and [View output conditions].

7 Enter the settings for [LayoutSettings], [Register Marks Settings], and [Output Setting], and then click [OK].

- For details on the setting items, refer to the "[Plot] Screen" and "[Plot Out] Screen" sections in Chapter 7 "Description of Functions" of the FineCut/Coat9 Reference Guide.
- If you do not want to apply [LayoutSettings], [Register Marks Settings], and [Output Setting], turn off [Set cut conditions].

8 Enter a preset name and then click [OK].

9 Click [OK].

1.6 Registering Presets in FineCut/Coat9

Register presets when outputting plots in FineCut/Coat9.

This is useful in cases such as when you want to save output settings as a preset when outputting plots. Register plot conditions set for each layer/color and other FineCut output settings as presets.

If specifying plot conditions for each layer

● If creating data in separate layers

This section explains how to register new presets on the [Plot Out] screen if creating data in separate layers.

1 Prepare a layer for each output condition and assign the objects.

2 Click the [Plot] button in the FineCut/Coat menu.

3 Display the [Layer] tab and then click [Specify The Plot Condition On Each Layer].

- If specifying a tool: Specify a tool for each layer.
- If specifying plot conditions: Specify plot conditions for each layer.

4 Set a tool or plot conditions for each layer.

5 Configure the items on the [Plot] screen and [Plot Out] screen.

- Refer to the following for the settings on the [Plot] screen and [Plot Out] screen that can be registered.

 ["Preset and Re-plotting Registration Information List"\(P. 58\)](#)

6 Click [Save Preset Setting].

The 'Plot out' dialog box is shown. It contains several sections: 'Plot Condition' with radio buttons for 'Plotter Condition', 'Select Condition', and 'Custom'; 'Tool' settings for Speed, Press, and Offset; 'Plot Condition on each Color or Layer' with a dropdown for 'Color Name / Layer Name' and a text field for 'Plot Condition Name'; 'ID Cut' with a 'Select Hot Folder...' button and radio buttons for 'EPS' and 'PDF'; and 'Options' with checkboxes for 'Sort', 'Use the Outside', 'Each Layer', 'Change Cutting Start Position', 'Head Withdrawal After Plot', 'Optimize Cutting Start Position', and 'Optimize Cutting Direction'. On the right side, there are buttons for 'Plot', 'Cancel', 'Preview...', 'Save As File...', 'Save Preset Setting' (highlighted with a red box), and 'ID Cut...'.

7 Enter a preset name and then click [OK].

The 'Save Preset Setting' dialog box is shown. It has a text field labeled 'Preset Name' containing the text 'PVC sheet-Fish sticker'. Below the text field are 'Cancel' and 'OK' buttons, with the 'OK' button highlighted by a red box.

- The name you enter will be registered in the condition preset settings.

The 'ConditionPresetSettings' dialog box is shown. It displays a table of registered presets. The table has columns for 'Preset Name' and 'ConditionApplyType'. The first row shows 'PVC sheet-Fish sticker' with 'Layer' as the condition apply type.

	Preset Name	ConditionApplyType
☒	PVC sheet-Fish sticker	Layer

If specifying plot conditions for each color

● If creating data with different colors

This section explains how to register new presets on the [Plot Out] screen if creating data with different colors.

1 Set the object color for each output condition.

2 Click the [Plot] button in the FineCut/Coat menu.

3 Display the [Color] tab and then click .

- If specifying a tool: Specify a tool for each color.
- If specifying plot conditions: Specify plot conditions for each color.

4 Set a tool or plot conditions for each color.

5 Configure the items on the [Plot] screen and [Plot Out] screen.

- Refer to the following for the settings on the [Plot] screen and [Plot Out] screen that can be registered.
 ["Preset and Re-plotting Registration Information List"\(P. 58\)](#)

6 Click [Save Preset Setting].

7 Enter a preset name and then click [OK].

- The name you enter will be registered in the condition preset settings.

1.7 Applying Presets

This section describes how to apply presets when plotting.

1 Open the design data.

- If managing plotting objects by layers, use data with a layer assigned to each plotting object.
- If managing plotting objects by colors, use data with a color assigned to each plotting object.

If configuring settings by
layers

If configuring settings by
colors

2 Click the [Plot] button in the FineCut/Coat menu.

3 Select the preset and then click [Apply].

- The output settings saved in the preset are reflected.

If configuring settings by layers

If configuring settings by colors

Chapter 2 Saving and Setting the Re-plot Function

This chapter

This section describes the saving and setting of the re-plot function.

Description	38	Saving and Applying the Re-plot Function	39
Difference from the Preset Function	38	First Output	39
		Second and Subsequent Outputs	41

2.1 Description

The re-plot function is used to link output settings to each design data set and save them for reuse.

This improves work efficiency when you want to output the same data with the same output settings again.

Difference from the Preset Function

Since the preset function must be selected before plotting, if many presets are created for each application, the user may become unsure regarding the "correspondence between data and presets" or "contents of output settings" when making a selection.

Conversely, the re-plot function automatically reapplies the output settings of the design data that was output once, allowing the user to perform plotting without uncertainty when making a selection.

We recommend using the preset and re-plot functions as follows.

- Preset: Saving basic output settings
- Re-plot function: Saving output settings linked to design data

2.2 Saving and Applying the Re-plot Function

Important!

- The re-plot function applies to design data that has been output at least once. Design data that has never been output will not have the output settings automatically applied by the re-plot function.

First Output

Since the re-plot function is turned on by default, output settings are saved simply by performing the normal output procedure.

- Refer to ["Preset and Re-plotting Registration Information List"\(P. 58\)](#) for the default settings of the re-plot function.

1 Open the design data.

2 Click the [Plot] button in the FineCut menu.

3 Select the preset and then click the [Apply] button. (When using a registered preset)

- The output settings saved in the preset are reflected.
- If you do not want to use a registered preset, proceed to the next step.

4 Input the output settings.

- Refer to the following for the settings on the [Plot] screen that can be registered.
 ["Preset and Re-plotting Registration Information List"\(P. 58\)](#)

5 Click the (Plot button).

6 Enter the output settings and then click the [Plot] button.

- Refer to the following for the settings on the [Plot Out] screen that can be registered.
 ["Preset and Re-plotting Registration Information List"\(P. 58\)](#)
- Output settings are saved when outputting plots.

Second and Subsequent Outputs

1 Open the design data.

- Open the same design data as the first output.

2 Click the [Plot] button in the FineCut menu.

3 Click the (Plot button).

- The previous output settings are automatically reflected.

- The name of the re-plot function appears in the preset name display area.

4 Click the [Plot] button.

- The previous output settings are automatically reflected.

- The re-plot function can save up to 999 files. Please note that if the maximum limit is exceeded, the oldest files will be deleted first.
- It is recommended that you export the files as needed.

Chapter 3 Selecting Output Settings Before Plotting

This chapter

This section describes the preliminary settings and procedures for selecting output settings registered as presets in Chapter 1 "Registering and Setting Presets" before plotting.

3.1 Enabling Selection of Output Settings Before Plotting

In order to select output settings before plotting, you must change the settings in [Plotter/User Setup]. Follow the procedure below to configure settings.

- 1 Click the [Plotter/User Setup] button in the FineCut/Coat menu.

- 2 On the [Output Setting] tab, select [Always select output settings before plotting] and then click [OK].

3.2 Selecting Output Settings Before Plotting

- To select output settings before plotting, you must enable the function in [Plotter/User Setup] in advance.
["Enabling Selection of Output Settings Before Plotting"\(P. 44\)](#)
- Output settings saved by the preset and re-plot functions can be selected.

1 Open the design data.

2 Click the [Plot] button in the FineCut menu.

3 Select a preset (or output settings saved by the re-plot function) and then click [Apply].

- The [Plot] screen opens with the selected output settings applied.

Chapter 4 Automatically Creating Layers for Presets

This chapter

This section describes the procedure for automatically creating layers on a design that were registered in Chapter 1 "Registering and Setting Presets".

This eliminates the need to create a layer for each design data set and allows you to assign data to each layer.

4.1 Automatically Creating a Layer

1 Create the design data.

2 Click the [Create Layer] button in the FineCut/Coat menu.

- The layer registered in the layer settings (👉 ["Registering Layers"\(P. 10\)](#)) will be added.

- You can also add layers first and then create the design data.

3 Assign design data objects to the added layer.

- Assign design data to match the plot conditions applied to the layers.

Chapter 5 Registering Presets from Favorite

This chapter

This section describes registering presets from [Favorite] in FineCut/Coat. If you have already registered "favorites" in FineCut/Coat, the output settings registered in [Favorite] can be carried over.

Description	50	If specifying plot conditions for each color.....	54
If specifying plot conditions for each layer.....	51		

5.1 Description

FineCut/Coat features a "Favorite" function to save information that specifies the tool or cut conditions for each layer and information that specifies the tool or cut conditions for each color.

If you are using "Favorite", you can register layer and default color set from the saved information. Importing from favorites can simplify the preliminary preparation for creating presets.

Refer to the FineCut/Coat9 Reference Guide for details on the "Favorite" function and supported models.

5.2 If specifying plot conditions for each layer

Important!

- This function can be applied when a favorite is registered.
Refer to the FineCut/Coat9 Reference Guide for information on how to register favorites.

1 Click the [Preset Settings] button in the FineCut/Coat menu.

2 Click [LayerSetting].

Important!

- If a preset whose [ConditionApplyType] is a layer is already registered, then the favorite cannot be imported.
Refer to I Want to Load My Favorites for Layer Settings After Creating a Preset for how to respond.

3 Click [Import from favorites].

4 Click [OK].**5** Under [SetConditions], select [Tool] or [Plot conditions] and then click [Import].

- [Tool]: Loads from the favorite setting of the tool specifications by layer.
- [Plot conditions]: Loads from the favorite setting of plot conditions by layer.
- Click [Import] to load the layers into the [LayerSetting] screen (the screen in Step 3).

6 Click [OK] (on the [LayerSetting] screen).

- Presets are registered in the condition preset settings using the information read from the favorite.
- The presets reflect plot conditions only.
- Set [LayoutSettings], [Register Marks Settings], and [Output Setting] by displaying the [Preset Edit] screen from [Edit].

5.3 If specifying plot conditions for each color

Important!

- This function can be applied when a favorite is registered.
Refer to the FineCut/Coat9 Reference Guide for information on how to register favorites.

1 Click the [Preset Settings] button in the FineCut/Coat menu.

2 Click [ColorSetting].

3 Click [Import from favorites].

4 Under [SetConditions], select [Tool] or [Plot conditions].

- [Tool]: Loads from the favorite setting of the tool specifications by color.
- [Plot conditions]: Loads from the favorite setting of plot conditions by color.

5 Click [Import].

- The color will be added to the [ColorSetting] screen (the screen in Step 3).

6 Click [OK] (on the [ColorSetting] screen).

- Presets are registered in the condition preset settings using the information read from the favorite.
- The presets reflect plot conditions only.
- Set [LayoutSettings], [Register Marks Settings], and [Output Setting] by displaying the [Preset Edit] screen from [Edit].

Chapter 6 Description of Functions

This chapter

This section describes each function of the presets and re-plotting.

Preset and Re-plotting Registration Information List.....	58
[Plotter/User Setup] Screen.....	61
Output Settings	61

6.1 Preset and Re-plotting Registration Information List

FineCut/Coat9 Screen	Setting Item		Preset	Re-plot	Notes

6.2 [Plotter/User Setup] Screen

Click the [Plotter/User Setup] button in the FineCut/Coat menu.

Output Settings

Configure the environment settings for the preset function and re-plotting function as well as perform configuration file imports and exports.

Items		Description	Default
[Always select output settings before plotting]		Displays the preset selection screen before the "Plot" screen is displayed.	Unchecked
[Re-plot Setting]	Record output settings when plotting	Records the settings at the time of plot output and links that to the design data. Refer to the "Preset and Re-plotting Function Guide" for a description of the settings that can be recorded.	Checked
	Record output settings while editing	If the "Plot" screen is closed while editing output settings, the output settings are recorded linked to the design data, as when outputting plots.	Unchecked
	Import	Imports a re-plot setting file that has been exported.	-
	Export	Exports the re-plot setting file for the currently selected model.	-
	Delete	Deletes all re-plot setting files for the currently selected model.	-

Chapter 7 Troubleshooting

This chapter

This section describes methods to solve problems when they occur and how to operate the system if you are not sure what to do.

I Want to Transfer the Re-plot Function or
Presets to Another PC.....64
Export and Import of the Re-plot Function . 65

Exporting and Importing Presets.....67
Exporting and Importing Output Condition
Settings70

7.1 I Want to Transfer the Re-plot Function or Presets to Another PC.

To transfer the re-plot function or presets, an output condition setup file is required in addition to the respective files.

Refer to the following to transfer files from the source PC to another PC.

● If transferring a re-plot function file to another PC

- "Re-plot function" file
 ["Export and Import of the Re-plot Function"\(P. 65\)](#)
- "Output condition setup" file
 ["Exporting and Importing Output Condition Settings"\(P. 70\)](#)

● If transferring preset function files to another PC

- "Preset" files
 ["Exporting and Importing Presets"\(P. 67\)](#)
- "Output condition setup" File
 ["Exporting and Importing Output Condition Settings"\(P. 70\)](#)

Export and Import of the Re-plot Function

- 1 On the source PC, click the [Plotter/User Setup] button in the FineCut/Coat menu.

- 2 On the [Output Setting] tab, click [Re-plot Setting] and then [Import].

- 3 Specify the file location and file name and then click [OK].
- 4 On the destination PC, click the [Plotter/User Setup] button in the FineCut/Coat menu.

- 5 In the [Plotter] tab, set [Model] to the same model as the source PC.

6 On the [Output Settings] tab, click [Re-plot Setting] and then [Import].

7 Specify the file you saved in Step 4 and load it.

Exporting and Importing Presets

- 1 On the source PC, click the [Preset Settings] button in the FineCut/Coat menu.

- 2 Select the check box for the preset you wish to export, click the [...] button in the upper right, and then click [Export] from the sub-menu.

- 3 Specify the file location and file name and then click [OK].

- 4** On the destination PC, click the [Plotter/User Setup] button in the FineCut/Coat menu.

- 5** In the [Plotter] tab, set [Model] to the same model as the source PC.

- 6** Click the [Preset Settings] button in the FineCut/Coat menu.

7 Click the button in the upper right and then click [Import] from the sub-menu.

8 Specify the file you saved in step 3 and load it.

Exporting and Importing Output Condition Settings

- 1 On the source PC, click the [Plotter/User Setup] button in the FineCut/Coat menu.

- 2 In the [Plotter] tab, set [Model] to the same model exporting the plot conditions.

- 3** Click the [Output Condition Setup] button to open the [Output conditions settings] screen.

- 4** Click the [Export] button.

5 Specify the file location and file name and then click [Save].

6 On the destination PC, click the [Plotter/User Setup] button in the FineCut/Coat menu.

7 In the [Plotter] tab, set [Model] to the same model as the source PC.

8 Open the [Output conditions settings] screen and then click the [Import] button.

9 Specify the file you saved in step 5 and load it.
